DETAILED ITINERARY

About the Wonder Cave

- Situated inside the Bothongo Rhino and Lion Nature Reserve the Wonder Caves are a site to behold and are our first stop into this fully packed day tour.
- The Wonder Caves are said to have been discovered by Italian miners in 1898 where they mined out approximately 15% from the formation and brought them to the surface.
- The formations mined consist of calcite which were placed in a self-built oven for 2 weeks for about 1100 degrees. This formed a powder which was taken by ox wagon to Pretoria & Johannesburg to make cement, toothpaste, use to extract gold and the like.
- Mining was stopped in 1902 due to the outbreak of war and low productivity.
- This is the 3rd largest chamber in South Africa, the largest being Congo Caves and second largest Sudwala Caves.
- The cave is entered by going down 87 stairs at a 45 degrees angle dropping 22 meters below the surface. You will then go down an elevator with a drop of a further 18 meters into the cave.
- The Wonder Cave is said to be UNESCO World Heritage Site and is a Natural Wonder dating back to 5-10 million years.
